Introduction and Methodology	2
Analysis of centralized procurement	8
Analysis of summary data of hospital, centralized and drugstore purchases/sales	22
Conclusion	54

Introduction and Methodology

Introduction and Methodology

The objective:

is to determine the list of single source drugs purchased using the state and local budgets, as well as out-of-pockets.

In this study, a single-source drug is considered to be such medicine that contains the active substance (or a combination of them) that is registered by only one applicant in the State Register of Medicinal Products.

A single-source drug may be a result of restrictions that impose intellectual property protection legislation or due to economic (business) considerations of drug manufacturers. The study did not evaluate the reasons why the drug is a single-source one.

Methodology:

The following data were obtained for the study:

- The data of the State Register of Medicinal Products (hereinafter — SRMP) as of September 28, 2018;
- Data of centralized procurement (orders of the Ministry of Health of Ukraine on the distribution of medicines), 2016/2017, conducted by specialized international organizations.
- Data on hospital (local and centralized together) purchases and drugstore sales received from an external analytic service supplier.

The analysis consisted of two parts and was carried out as follows:

Part 1

1. Using the MOH's Orders on the distribution of medicines, an aggregated document was created with data on the procurement of medicines by areas.
2. Each position (INN) was assigned an ATC level 6 code using manual and automatic search in SRMP.
3. After this, the merging of the same positions (INN) was carried out and the total purchase volumes were determined. Different lots with the same INN were created due to the fact that the INN could be in different sub-directions or additional purchases occurred as a result of cost savings.
4. Using a manual and automatic search in SRMP, data were obtained on the number of applicants and trade names for each of the procurement items.

5. Single-source and multi-source drugs were counted, and single-source drugs were sorted according to manufacturers.

6. A rating table of single-source drugs was created, indicating their manufacturer, trade name (in Ukraine), the volume of purchases and indications for use.

7. The analysis of the largest groups of single-source drugs by ATC codes is conducted.

Part 2

1. A file containing data on hospital (incl. centralized) purchases and drugstore sales of medicines in 2017 was received from an external supplier.
2. An automatic calculation of the number of trade names and applicants available in SRMP for each position by ATC code level 6 and, separately by INN, was made.

3. "Unique" ATC codes, which were assigned to drugs, to which WHO did not assign ATC codes, were removed. Perhaps it was drugs that have market authorisation only in Ukraine and the CIS countries.
4. The database was cleared, homeopathic and herbal drugs were removed.
5. The final manual analysis of the database was carried out and only single-source drugs were kept based on the data of SRMP.
6. Each single-source drug is designated by the information regarding the manufacturer, trade name, sales volumes and the presence in the nomenclature of centralized procurement (2016/2017).
7. A rating table of manufacturers that indicates the number of single-source drugs and sales volumes was created.
8. A rating table of sales by ATC codes level 1 was created.

Each stage of the study is shown in the tables below. Information about the volume of purchases is rounded according to the rules of mathematics. Exact values and all stages of the study are provided in a separate file.

Limitations of the study:

- Information on procurement volumes may not be accurate due to the lack of a publicly available source of aggregated information about all centralized and hospital purchases.
- Data from the State Register of Medicinal Products were analyzed to determine the belonging to single-source drugs; actual presence in the market was not studied (1).
- The analysis was performed only for active substances, thus, a single-source drug form and/or dosing for certain active substances could be missed (2).
- The legal relationships between applicants were not investigated; therefore, it is possible that some of the multi-source drugs are in fact single-source ones (3).
- Data on the volume of sales were obtained from an external supplier; the contractor did not conduct a study of their verification.

Example 1.
Medicines with the active substance etanercept are registered by two applicants - Pfizer H.C.P. Corporation (USA) and JSC "Farmak" (Ukraine), however, there are no data on sales of Arthrocept ("Farmak").

Example 2.1.
Creon (Abbott Laboratories GmbH, Germany) consists of pancreatin, which is also sold by a number of other pharmaceutical companies. However, only the Abbott company has the indicated drug in the minimicrosphere dosage form. This situation limits the ability of other manufacturers to participate in bidding, because, during the hospital and centralized procurement, the MOH of Ukraine creates separate lots for pancreatin in the form of minimicrosphere.

Example 2.2.
An Amphotericin B single-source drug can be either in liposomal or deoxycholate forms.

The only liposomal form is registered in Ukraine.

Example 3.

Drugs with the active ingredient Trastuzumab are registered by two applicants F. Hoffmann-La Roshe Ltd (Switzerland) and Lumiere Pharma (Ukraine), although the latter produces Trastuzumab from in bulk products of F. Hoffmann-La Roshe Ltd. Thus, the specified drug de facto can be single-source one.

Example 4.

In Ukraine, there is a developed “gray market” of cytostatic and other drugs, which are resold by different individuals after their purchasing in other countries (Russia, Poland, Turkey, etc.). Some of these drugs may not be registered in Ukraine due to patent restrictions or economic reasons, however, their assessment was not carried out in the framework of this study.

Analysis of centralized procurement

Analysis of centralized procurement

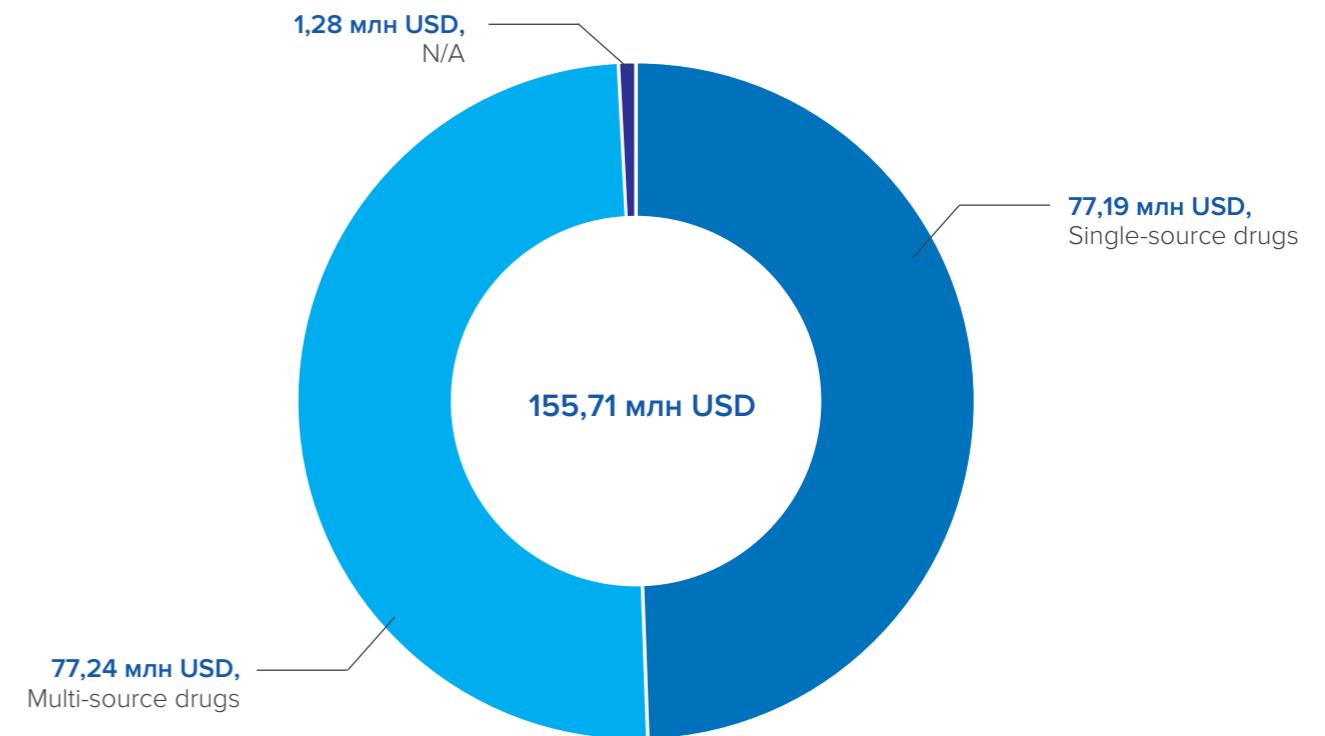

Table 1.

The distribution between single-source and multi-source drugs in centralized procurement of the MOH of Ukraine

Group	Amount, USD
Single-source drugs	= 77 190 000
Multi-source drugs	= 77 240 000
N/A	= 1 280 000
Total amount:	= 155 710 000

Almost half of all funds in the centralized procurement of the MOH of Ukraine have been spent on single-source drugs. The determination of which part of them is under patent protection and which part is

single-source for economic reasons was not carried out in the framework of this study.

The distribution between single-source and multi-source drugs in centralized procurement of the MOH of Ukraine

Analysis of centralized procurement

Table 2.
The distribution of single-source drugs among pharmaceutical companies and total sales
for each manufacturer

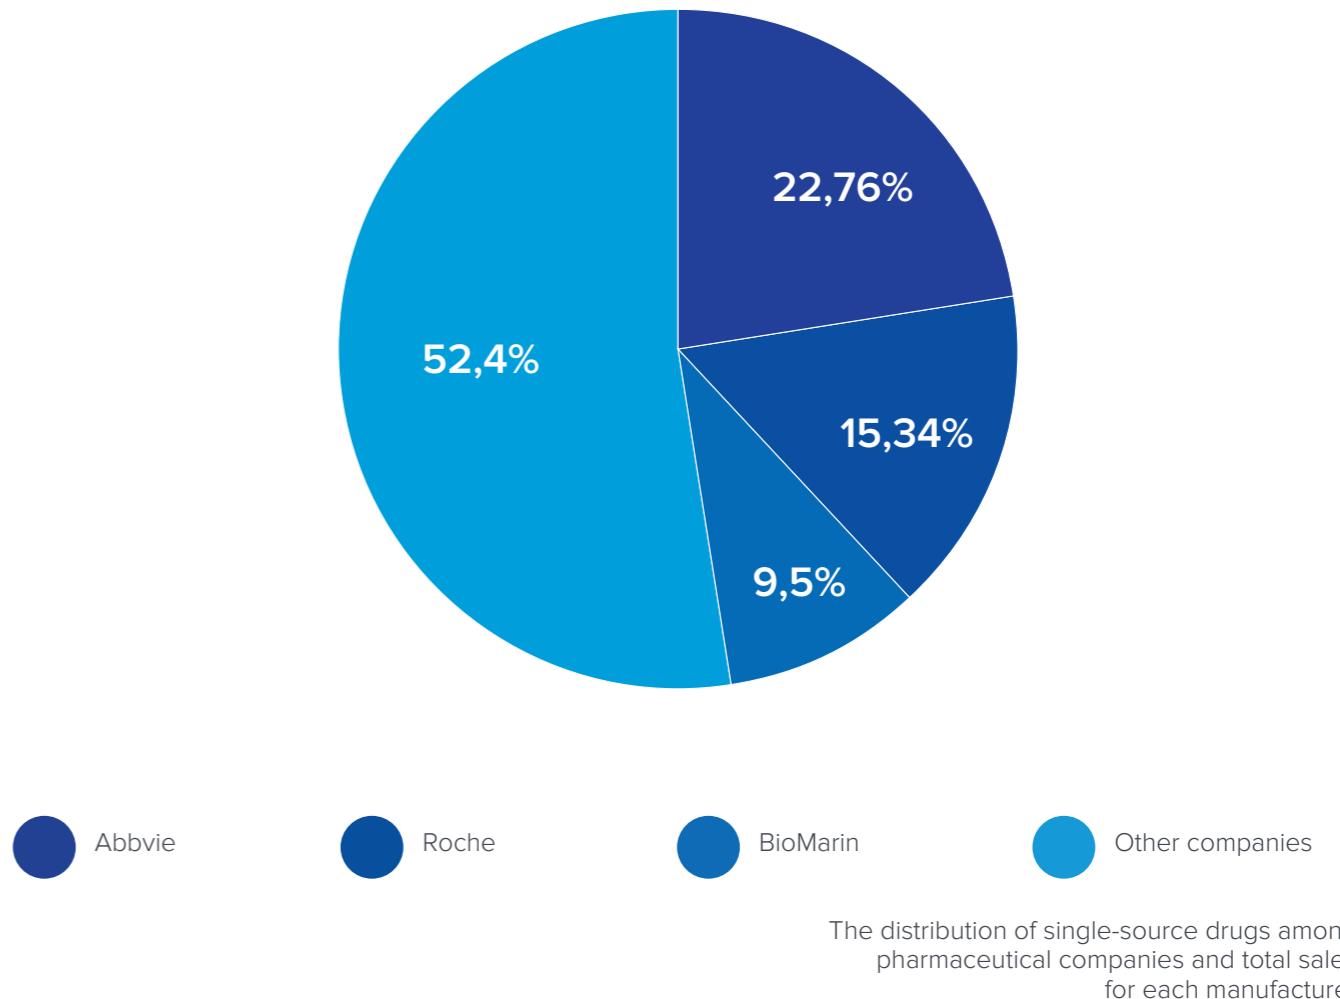

Company name	Medicines	Amount, =USD
AbbVie	Lopinavir/Ritonavir, Adalimumab, Omritasvir/Paritaprevir/Ritonavir, Dasabuvir, Ritonavir	17 570 000
Roche	Trastuzumab, Rituximab, Dornase alfa, Tocilizumab, Peginterferon alfa-2a, Valganciclovir, Epoetin beta	11 850 000
BioMarin	Elosulfase alfa, Sapropterin, dihydrochloride	7 340 000
Novartis	Daptomycin, Basiliximab, Nilotinib, Everolimus, Basiliximab, Daptomycin	6 860 000
Genzyme (Sanofi)	Imiglucerase, Laronidase, Alglucosidase alpha, Agalsidase beta, Antithymocyte immunoglobulin (rabbit)	6 590 000
Shire	Idursulfase, Velaglucerase alfa	5 990 000
Baxter	Factor VIII inhibitor bypassing activity	3 940 000
Merck Sharp & Dohme	Caspofungin, Ertapenem	2 840 000

Company name	Medicines	Amount, =USD
Schering-Plough (Merck & Co)	Posaconazole, Follitropin beta, Ganirelix	2 130 000
Novo Nordisk	Recombinant factor VIIa)	1 750 000
Astellas Pharma	Micafungin	1 530 000
Boehringer Ingelheim	Alteplase, Tenecteplase	920 000
Gilead Sciences	Sofosbuvir/Velpatasvir, Sofosbuvir/Ledipasvir	810 000
Orion Corporation	Toremifene, Levosimendan	750 000
Bayer	Iloprost, Riociguat	740 000
Johnson & Johnson	Darunavir, Methylphenidate, Etavirine	720 000
Aspen Pharma	Melphalan, Fondaparinux sodium, Mercaptopurine. Chlorambucil. Tioguanine, Busulfan, Azathioprine	600 000
Baxalta (ex-Medac)	Pegasparagase	560 000
Sanofi-Aventis	Lenograstim	550 000
Pfizer	Antithymocyte immunoglobulin (equine), Sildenafil, Etanercept, Taliglucerase alfa, Tigecycline	460 000
Bristol-Myers Squibb	Dasatinib, Daclatasvir	420 000
BioPharma (Ukraine)	Pegfilgrastim	380 000
Bharat pharmaceuticals	Amphotericin B (liposomal)	370 000
Medac Pharma	Hydroxycarbamide, Treosulfan, Asparaginase, Urokinase, Lomustine	310 000
Rik Pharma (Ukraine)	Carbetocin	200 000

Company name	Medicines	Amount, =USD
Swedish Orphan Biovitrum	Nitisinone, Anakinra	190 000
National Centre for Nuclear Research	Technetium pertechnetate (99mTc), Sodium iodide Na131I	190 000
Lipomed	Thalidomide	160 000
Baxter Oncology	Mesna	140 000
AstraZeneca	Ticagrelor	100 000
Ebewe Pharma (Sandoz)	Mitoxantrone	100 000
Lupin Limited	Rifabutin	60 000
Laboratoire Aguettant	Noradrenaline	40 000
Admeda Arzneimittel GmbH	Dobutamine	40 000
Cheplapharm Arzneimittel GmbH	Tretinoin	10 000
Orphan Europe	Dactinomycin	–
GlaxoSmithKline	Ticarcillin/clavulanic acid, Eptifibatide	–
Total:		77 190 000

The pharmaceutical company Abbvie has the largest single-source drug sales of \$ 17,572 million, followed by Roche with \$ 11,845 million and BioMarin with \$ 7339 million.

Analysis of centralized procurement

Analysis of centralized procurement

Table 3.
Single-source drugs by sales volume

International nonproprietary name	Trade name	Disease or Indications for use	ATC-code	Amount, = USD	Manufacturer
Lopinavir/Ritonavir	Алувіа	HIV/AIDS	J05AR10	12 690 000	Abbvie
Idursulfase	Елапраза	Mucopolysaccharidosis	A16AB09	5 990 000	Shire
Nilotinib	Тасігна	CML	L01XE08	5 120 000	Novartis
Trastuzumab	Герцептин	Breast cancer	L01XC03	5 100 000	Roche
Elosulfase alfa	Вімізим	Mucopolysaccharidosis	A16AB12	4 610 000	BioMarin
Imiglucerase	Церезим	Gaucher disease	A16AB02	4 140 000	Genzyme
Anti-inhibitor coagulant complex	Фейба	Haemophilia	B02BD03	3 940 000	Baxter
Adalimumab	Хуміра	JRA	L04AB04	3 360 000	Abbvie
Rituximab	Мабтера	Lymphoma	L01XC02	2 620 000	Roche
Caspofungin		Anti-fungal	J02AX04	2 580 000	MSD
Galsulfase	Наглазим	Mucopolysaccharidosis	A16AB08	2 550 000	BioMarin
Dornase alfa	Пульмозим	Mucoviscidosis	R05CB13	2 200 000	Roche
Posaconazole	Ноксафіл	Anti-fungal	J02AC04	2 050 000	Shering-Plough

International nonproprietary name	Trade name	Disease or Indications for use	ATC-code	Amount, = USD	Manufacturer
Laronidase	Альдуразим	Mucopolysaccharidosis	A16AB05	1 750 000	Genzyme
Micafungin	Мікамін	Anti-fungal	J02AX05	1 530 000	Astellas
Clofazimine	Лампрен	TB	J04BA01	1 360 000	Novartis
Ombitasvir/Paritaprevir/Ritonavir	Вікейра Пак	Hepatitis C	J05AP52	1 340 000	Abbvie
Tocilizumab	Актемра	JRA	L04AC07	1 030 000	Roche

Urokinase	Урокіназа Медак	Thrombolytic	B01AD04	–	Medac
Velaglucerase alfa	Впрів	Gaucher disease	A16AB10	–	Shire

\$12, 690 million

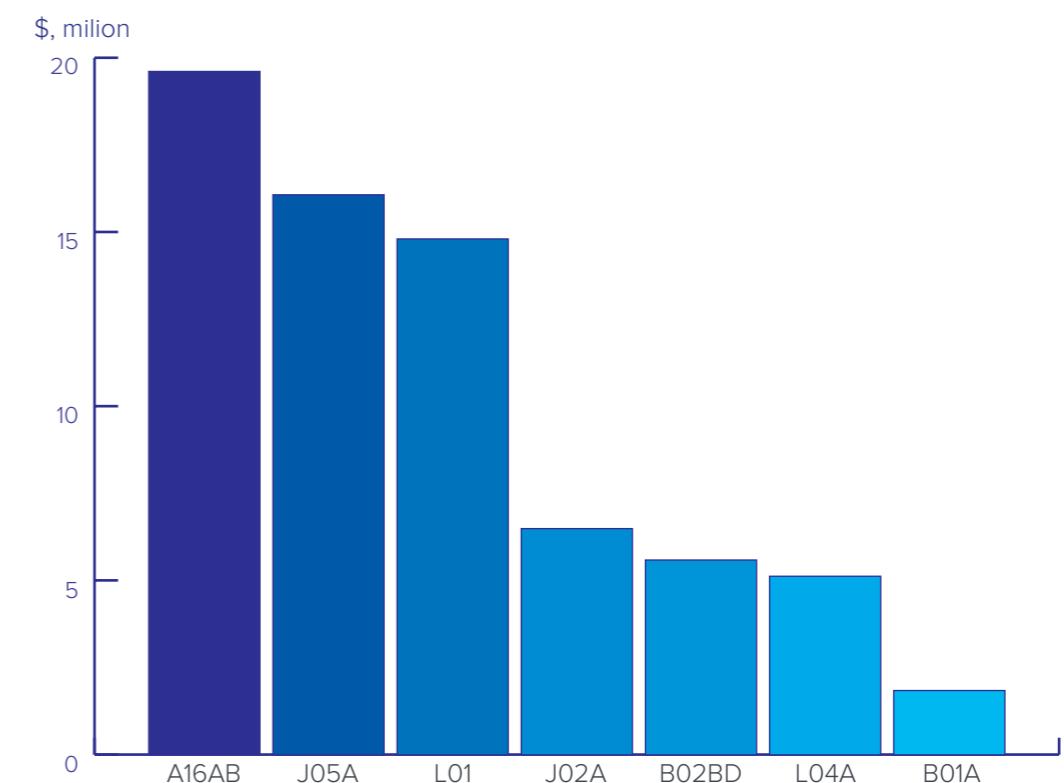

The procurement amount of the single-source drug "Aluvia" (Lopinavir / Ritonavir) for the treatment of HIV/AIDS, which is procured through the centralized procurement mechanism

Table 4.
ATC codes of single-source drugs for which the most funds are spent

ATC code	ATC name	Total amount, USD
A16AB	Other alimentary tract and metabolism products	19 612 238
J05A	Direct acting antiviral	16 065 870
L01	Antineoplastic agents	14 815 216
J02A	Antimycotics for systemic use	6 527 051
B02BD	Blood coagulations factors	5 690 488
L04A	Immunosupresants	5 135 608
B01A	Antithrombotic agents	1 876 398

The group of medicines with ATC code A16AB has the largest volume. The medicines of this group are purchased for the treatment of orphan diseases (mucopolysaccharidosis,

Gaucher disease, Fabry disease, Pompe disease, tyrosinemia type 1, phenylketonuria).

ATC codes of single-source drugs for which the most funds are spent

Conclusions and discussion

Conclusions and discussion

In 2017, in Ukraine, single-source drugs were sold in the amount of UAH 5 billion 91 million using centralized and hospital purchases, as well as a drugstore network. This includes only drugs with ATC code Level 6 and INN that were assigned by the World Health Organization.

In 2017, Abbvie had the largest sales of single-source drugs; the company received more than UAH 591 million from the sale of 5 drugs. This amount was received due to the sales of Aluvia (lopinavir/ritonavir).

In addition, in 2017, \$77 million, or half of all funds, were spent on the purchase of drugs through the centralized procurement mechanism of the MOH of Ukraine, involving the international organizations.

Due to the fact that such a significant amount is spent on the purchase of single-source drugs, it is necessary to conduct a further study of

the causes of this situation. In particular, it is necessary to examine the patent status of certain single-source drugs.

A situation with Aluvia illustrates the importance of the further study of this issue. According to the Public Health Center of the MOH of Ukraine, as of 1 Dec 2018, antiretroviral therapy was provided for 101,358 patients (out of 144,633 HIV-infected under control, as of 1 Oct 2018), 61,649 of them received treatment funded by the state budget, and the remaining 39709 patients received treatment at the expense of international donor organizations. According to the regional applications within the centralized procurement program, the 100% of annual demand for antiretroviral drugs is approximately UAH 877 million and approximately UAH 403 million, for tablets of lopinavir/ritonavir. Calculation of the average cost of an annual course of treatment with antiretroviral drugs has a number of difficulties due to different ways of supplying drugs,

different costs of procurement, even within the same source of supply; besides the number of patients also varies with time. According to the passport of the budget program of the centralized procurement for 2018 regarding 90,249 patients, who receive antiretroviral therapy, and data on 100% annual need for ART drugs, the average annual cost of treatment for one patient will be approximately UAH 9725. At the same time, according to the Global Price Reporting Mechanism website, 23,843 patients received lopinavir/ritonavir in doses of 200/50 mg and 100/25 mg (the original Aluvia) in Ukraine in 2017, and the cost of the annual course of treatment was \$401.69. At the same time, the average cost of the annual course of treatment in Europe and Central Asia was \$241.03. Thus, the implementation of generic competition between lopinavir/ritonavir drugs should lead to significant savings in state budget funds and an increase in the availability of drugs purchased for the state budget.
